# **Duct Air Quality Sensors**

- Maintenance-free CO<sub>2</sub> sensing element (depending on the type) based on optical infrared absorption measurement (NDIR<sup>1</sup>)
- Or with VOC<sup>2)</sup> sensing element, based on a heated tin dioxide semiconductor
- $\text{CO}_2$  temperature (active or passive) and  $\text{CO}_2$  humidity-temperature multisensor
- No recalibrations required
- Operating voltage AC 24 V or DC 15...35 V
- Signal outputs DC 0...10 V or DC 0...5 V or 4...20 mA adjustable
- Selectable passive temperature sensing element
- 1) NDIR = Non dispersive infrared
- 2) VOC = volatile organic compounds (also called mixed gas)

Use

In air ducts of ventilation and air conditioning plant to enhance room comfort and to optimize energy consumption by providing demand-controlled ventilation. The sensor acquires:

- CO<sub>2</sub> concentrations
- VOC concentrations as an indication of odors in the duct air, such as tobacco smoke, body odor, or material fumes
- The relative humidity of the duct air
- The duct air temperature

Sensors QPM11... and QPM21... can be used as a:

- Control sensor in the supply or extract air duct
- Transmitter for building automation and control systems and / or display units (QPM21...D only).

Typical use:

- Acquisition of CO<sub>2</sub> and VOC concentrations: In party rooms, lounges, fair pavillions and exhibition halls, restaurants, canteens, shopping malls, sports gymnasiums, sales rooms, and conference rooms
- Acquisition of CO<sub>2</sub> concentrations: In ventilation plant of rooms with varying occupancy levels where smoking is prohibited, such as museums, theatres, movie theatres, auditoriums, office spaces and school rooms

Important!

- The QPM21... sensors are not suited for use as safety devices, such as gas or smoke warning devices!
- The sensors must not be used outdoors!

Type reference	CO <sub>2</sub> measuring range	VOC time constant	Temperature measuring range	Humidity measuring range	Measured value display

QPM2162	02000 ppm		050 °C / –35+35 °C	0100 %	no
QPM2162D	02000 ppm		050 °C / –35+35 °C	0100 %	Yes
QPM2163	02000 ppm	Slow (R1) Normal (R2) Fast (R3)	050 °C / –35+35 °C	0100 %	no
QPM2180	02000 ppm		Depending on connected sensing element		no

## Type summary

#### Ordering

When ordering, please give name and type reference, e.g.: Duct air quality sensor **QPM2102** The sensor is supplied complete with mounting flange and cable entry gland M16.

#### Equipment combinations

All systems and devices capable of processing the following sensor signals:

- DC 0...10 V or DC 0...5 V or 4...20 mA
- passive sensor signals for sensor QPM2180

#### CO<sub>2</sub> concentrations

The Symaro<sup>™</sup> air quality sensors acquire the CO<sub>2</sub> concentration by infrared absorption measurement (NDIR).

The resulting output signal of DC 0...10 V or DC 0...5 V or 4...20 mA is proportional to the CO<sub>2</sub> content of the ambient air.

Function diagram CO<sub>2</sub> (output X1)

# VOC concentration (QPM1100, QPM1160, QPM1162)

Symaro<sup>™</sup> air quality sensors determine the mixed gas concentration (VOC) using metal-oxide semiconductor sensing elements. The sensors measure precisely at all times and with no maintenance and recalibration required thanks to an integrated compensation mechanism, saving service costs.

The sensor provides a DC 0...10 V or DC 0...5 V or 4...20 mA output signal proportionate to the VOC content of the ambient air.

#### Ventilation demand diagram (output X2)

Relative humidity (QPM2162, QPM2162D QPM1162 and QPM2163) The sensor acquires the relative humidity in the air duct with a capacitive humidity sensing element whose capacitance changes as a function of the relative humidity. An electronic measuring circuit converts the signal from the sensing element to a continuous DC 0...10 V or DC 0...5 V or 4...20 mA signal, corresponding to a relative humidity range of 0...100 %.

Temperature active (QPM216...)

The sensor acquires the temperature in the air duct with a sensing element whose electrical resistance changes as a function of the temperature. The change is converted to an active DC 0...10 V or DC 0...5 V or 4...20 mA output signal ( $\cong 0...50$  °C or -35...+35 °C).

Temperature passive (QPM2180)

The sensor measures the room temperature using a sensing element where electrical resistance changes with the temperature of the ambient air. The sensing element is on the device's rear side and connected at the appropriate connection terminals. The following sensing elements are included with the device: - LG-Ni1000

- Pt1000
- Pt100
- NTC 10kOhm

# Sensing element

Mechanical design

The duct air quality sensor consists of housing, printed circuit board, connection terminals, mounting flange and immersion rod with measuring probe.

The 2-sectional housing is comprised of base and removable cover (without display: snap-on design; with display: screwed fastening). The measuring circuit and the setting elements are located on the printed circuit board inside the cover, the connection terminals on the base.

The humidity and temperature sensing elements are located at the end of the measuring probe and are protected by a filter cap.

Cable entry is made via the cable entry gland M16 (IP 54) supplied with the sensor, which screws into the housing.

Immersion rod and housing are made of plastic and are rigidly connected.

The sensor is fitted with the mounting flange supplied with the sensor. The flange is to be placed over the immersion rod and then secured in accordance with the required immersion length.

#### Setting elements ...

The setting elements are located inside the cover

The different vertical plug positions have the following meaning:

## **Engineering notes**

	To power the sensor, a transformer for safety extra low-voltage (SELV) with separate windings for 100 % duty is required. When sizing and protecting the transformer, local safety regulations must be complied with. When sizing the transformer, the power consumption of the duct sensor must be taken into consideration. For correct wiring, refer to the Data Sheets of the devices with which the sensor is used. The permissible cable lengths must be observed.
Cable routing and cable selection	When laying the cables, it must be observed that the longer the cables run side by side and the smaller the distance between them, the greater the electrical interference. Shielded cables must be used in environments with EMC problems. Twisted pair cables are required for the secondary supply lines and the signal lines.

## Mounting notes

Mounting location and	To ensure degree of protection IP54	resp IP65 the sensor mu	st be fitted with the cable	
orientation	To ensure degree of protection IP54 resp. IP65, the sensor must be fitted with the entry pointing downward! The sensor should be mounted in locations where it can be easily accessed for se			
Note!	<ul> <li>If used in connection with steam humidifiers, the distance to the humidifier must be a minimum of 3 m. If permitted by the installation, the distance should be as great as possible, but no more than 10 m</li> <li>The sensing elements in the immersion rod are susceptible to impact and shock. 		max. 500 Ohm
Functional data "Tempera-	Sensing range	See "Mode of operation"
ture" with QPM218	Measuring accuracy	See "Mode of operation"
	Time constant $t_{63}$	<3.5 min. at 2 m/s of circulated air
	Output signal (terminal B, M)	Passive
Air velocity	Max. air velocity V <sub>max.</sub>	10 m/sec.
Degree of protection	Protection degree of housing QPM2102D, QPM2160D, QPM2162D	IP65 according to EN 60529 in the built-in state
		IDE4 according to EN 60520
	QPM1100, QPM1160, QPM1162, QPM2100, QPM2102, QPM2160, QPM2162, QPM2163, QPM2180	IP54 according to EN 60529 in the built-in state
	Protection class	III according to EN 60730-1
Electrical connections	Screw terminals for	$1 \times 2.5 \text{ mm}^2 \text{ or } 2 \times 1.5 \text{ mm}^2$
·····-		

Environmental conditions	Operation to	IEC 60721-3-3	
	Climatic conditions	Class 3K3	
	Temperature (housing incl. electronics)	050 °C	
	Humidity	095 % r.h. (noncondensing)	
	Mechanical conditions	Class 3M2	
	Transport to	IEC 60721-3-2	
	Climatic conditions	class 2K3	
	Temperature	−25+70 °C	
	Humidity	<95 % r.h.	
	Mechanical conditions	Class 2M2	
Materials and colors	Base	Polycarbonate, RAL 7001 (silver-grey)	
	Cover	Polycarbonate, RAL 7035 (light-grey)	
	Immersion rod	Polycarbonate, RAL 7001 (silver-grey)	
	Filter cap	Polycarbonate, RAL 7001 (silver-grey)	
	Mounting flange	PA66 – GF35 (black)	
	Cable entry gland	PA, RAL 7035 (light-grey)	
	Sensor (complete assembly)	Silicone-free	
	Packaging	Corrugated cardboard	
Directives and Standards	Product standard	EN 60730-1	
		Automatic electrical controls for household and	
		similar use	
	Electromagnetic compatibility (Applications)	For use in residential, commerce, light-industrial and	
		industrial environments	
	EU Conformity (CE)	CE1T1962xx *)	
	RCM Conformity	CE1T1961en_C1 *)	
	UL	UL 873, http://ul.com/database	
	UKCA	A5W00188730A *)	
	Applicability of flammable refrigerants	Comply with clauses 22.116 and 22.117 from IEC	
	(Only for QPM2100 produced after April 1st,	60335-2-40 for used together with all refrigerants	
	2025)	listed in Annex BB (IEC 60335-2-40)	
Environmental compatibility	The product environmental declaration CE1E1962 <sup>°)</sup> contains data on environmentally compatible prod-		
	uct design and assessments (RoHS compliance, materials composition, packaging, environmental		
	benefit, disposal).		
Weight	Incl. packaging		
	QPM1100, QPM2100, QPM2102	Approx. 0.25 kg	
	QPM2160, QPM2162, QPM2180	Approx. 0.25 kg	
	QPM2102D	Approx. 0.27 kg	
	QPM2160D, QPM2162D	Approx. 0.27 kg	
	QPM1160, QPM1162	Approx. 0.237 kg	
	QPM2163	Approx. 0.263 kg
