1 About this documentation

1.1 Navigation / Quick access

Information about a specific actuator is provided throughout the document. The structure of chapters 2 to 4 is as follows:

2 Projektierung — **geräteorientiert**
  2.1 Produktbeschreibung
  2.2 Anwendung
3 Handhabung — **handlungsorientiert**
  3.1 Montage und Installation
  3.2 Inbetriebnahme und Betrieb
4 Funktionen und Steuerung — **baugruppenorientiert**
  4.1 3-Punkt-Ansteuerung
  4.2 Stetige Ansteuerung

Quick access to important information including reference to pages:

1.2 Revision history

Revision	Date	Changes	Chapter
First edition	16.07.2010	-	-
2.0	2010-12-12	Rotary actuator SAL..T10 integrated	
		Mounting and installation of butterfly valves and slipper valves corrected and expanded	3.1
		New chapter „Position feedback U"	4.6
		Technical data corrected	5
2.1	2011-09-14	V..F53.. valves added	2.5
		SAL.T20 rotary actuators added	1.1, 1.2, 2.3, 2.4, 2.5, 2.6, 3, 3.1, 4.12, 5, 7
3	2012-09-12	Corrections regarding SAX..Series „G" " VVF53.50-40K valve added	2.4, 4.1, 4.7, 4.13, 5, 6.4
3.1	2013-12-17	SAL..T40 is added	…
3.2	2014-11-20	Supplemented with new valves V..F22, V..F32.., V..F42..	1.1, 1.3, 2.1, 2.2, 2.3, 2.4, 2.5, 2.6, 3.1, 4.1, 4.3, 4.4 4.13, 5, 6.1, 6.4, 7
		Supplemented with actuators SAV..	1.1, 1.3, 2.1, 2.2, 2.3, 2.4, 2.5, 2.6, 2.8, 4.1, 4.4, 4.7, 4.13, 5, 6.4, 7
3.3	2015-10-26	Supplemented with actuators SAY..P..	Various
3.4	2016-10-04	Actualization of headings with SAY.., added SAY.. to information on content and accessories	Various
3.5	2017-05-26	New: Communicating actuators (SAX61.03/MO)	Whole document
3.6	2020-01-30	New: Communicating actuators SAX61P03/MO, SAY61P03/MO, SAV61../MO New accessory: ASK32N	Various
		Update to communicating actuators (parameters and functions)	4.13
3.7	2022-05-19	Changes for SA..31P, SA..61P and SA..81P Valve types: VXF43, VPF43, VFW41, FVL41, VFW41U und SAL../F05 added	Various
3.8	2024-01-16	Replaced various pictures (better quality) Footnote for hand-lever ASK41.. added LED-status "dark" added Corrections to connector diagram SA..61../MO Pictures SAL..T.. corrected Update revision numbers	Various 2.5.4 3.2.2 6.3 3.1.8, 3.1.9 7

1.4   Before you start

1.4.1   Trademarks

The table below lists the third-party trademarks used in this document and their legal owners. The use of trademarks is subject to international and domestic provisions of the law.

Trademarks	Legal owner
Acvatix™	Siemens Switzerland Ltd

All product names listed in the table are registered (®) or not registered (™) trademarks of the owner listed in the table. We forgo the labeling (e.g. using the symbols ® and ™) of trademarks for the purposes of legibility based on the reference in this section.

1.4.2   Copyright

This document may be duplicated and distributed only with the express permission of Siemens, and may be passed on only to authorized persons or companies with the required technical knowledge.

1.4.3　Quality assurance

These documents were prepared with great care.
- The contents of all documents are checked at regular intervals
- All necessary corrections are included in subsequent versions
- Anpassungen bzw. Documents are automatically amended as a consequence of modifications and corrections to the products described

Please make sure that you are aware of the latest document revision date.

If you find lack of clarity while using this document, or if you have any criticisms or suggestions, please contact the product manager in your nearest branch office. The addresses of the Siemens regional companies are available at www.siemens.com/acvatix.

1.4.4　Document use / request to the reader

Before using our products, it is important that you read the documents supplied with or ordered at the same time as the products (equipment, applications, tools etc.) carefully and in full.

We assume that persons using our products and documents are authorized and trained appropriately and have the technical knowledge required to use our products as intended.

More information on the products and applications is available:
- On the intranet (Siemens employees only) at https://workspace.sbt.siemens.com/content/00001123/default.aspx.
- From the Siemens branch office near you www.siemens.com/acvatix or from your system supplier.
- From the support team at headquarters fieldsupport-zug.ch.sbt@siemens.com if there is no local point of contact.

Siemens assumes no liability to the extent allowed under the law for any losses resulting from a failure to comply with the aforementioned points or for the improper compliance of the same.

1.5　Scope of this documentation
This document shall serve as a source of knowledge. In addition to basic information, it provides general technical information about the actuators used in HVAC plants. It is also targeted at engineering staff, HVAC electrical planners, system integrators and service engineers and provides all information required for planning work, correct installation, commissioning and service.
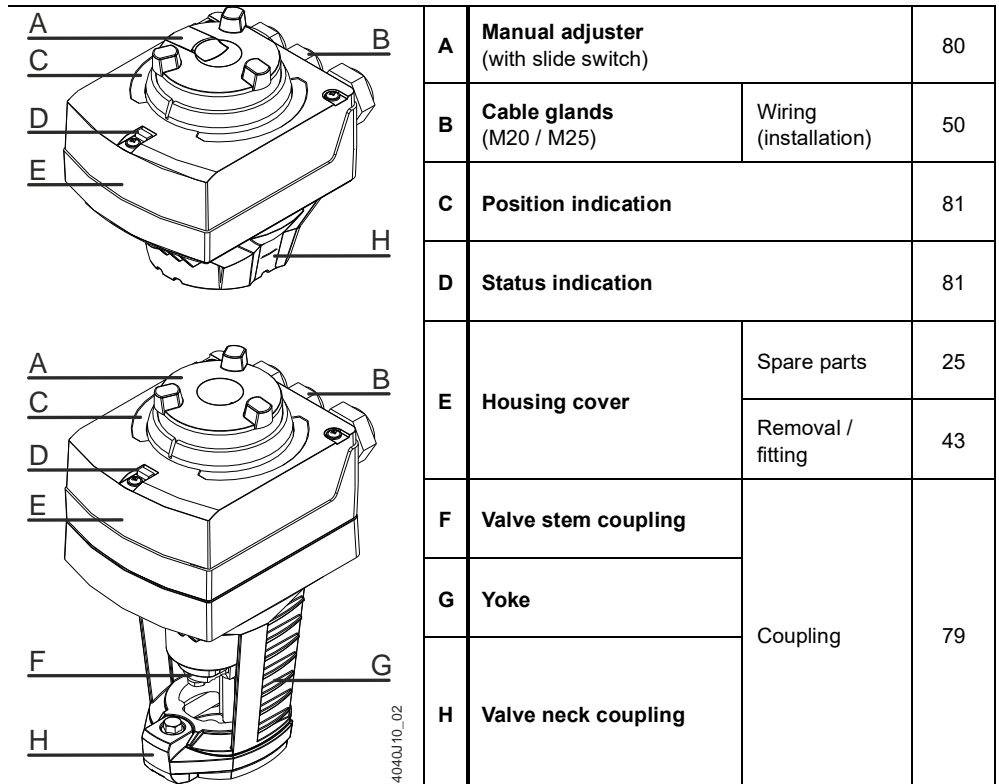

2 Engineering

2.1 Product description

The line of large actuators is comprised of stroke actuators SAX.., SAY.., SAV.. and rotary actuators SAL..

Mechanical design

1	User interface and electrical connections
2	Power transmission and preparation
3	Yoke (for assembly of actuator and seat, slipper or butterfly valve)

Components

A	**Manual adjuster** (with slide switch)		80
B	**Cable glands** (M20 / M25)	Wiring (installation)	50
C	**Position indication**		81
D	**Status indication**		81
E	**Housing cover**	Spare parts	25
		Removal / fitting	43
F	**Valve stem coupling**	Coupling	79
G	**Yoke**		
H	**Valve neck coupling**		

Network functions　　　See Section 3.2.2 Commissioning Modbus RTU

2.2 Use

SAX.., SAV.. For use in connection with Siemens 2-port or 3-port valves with 20/40 mm stroke, as control or shutoff valves for HVAC plants.

SAY.. For the operation of Siemens combi valves of type VPI46.40F9.5Q and VPI46.50F12Q with 15 mm stroke as control valves in ventilation, air conditioning, and district heating systems.

SAL.. For use in connection with Siemens butterfly or slipper valves, as control or shutoff valves for HVAC plants.

Note When using the actuators outdoors, weather shield ASK39.1 must be fitted. SA..61../MO are not suitable for outdoor applications.

2.3 Type summary

2.3.1 Stroke actuators

Product no.	Stock no.	Stroke	Pos. force	Operating voltage	Positioning signal	Spr. ret. time	Pos. time	LED	Manual adjuster [1]	Extra functions
SAX31.00	S55150-A105	20 mm	800 N	AC 230 V	3-position	-	120 s	-	Press and fix	-
SAX31.03	S55150-A106									
SAX61.03 **SAX61.03U**	S55150-A100 S55150-A100-A100			AC 24 V /DC 24 V	DC 0…10 V DC 4…20 mA 0…1000 Ω		30 s	✓		Position feedback, forced control, change of characteristic

Notes on ASZ7.5 [1]

For the combination SIMATIC S5/S7 and position feedback message, we recommend actuators with DC 0…9.8 V feedback signals.

The signal peaks that occur in the potentiometer ASZ7.5 may result in error messages on Siemens SIMATIC.
This is not the case when combined with Siemens HVAC controllers.
The reason is that SIMATIC has a higher resolution and faster response time.
Use a 3-wire connection as the voltage divider for the potentiometer.
Powering the potentiometer over the wiper may result in a shorter lifecycle.
Signal peaks occurring in this operating mode increase in frequency and severity throughout its lifecycle.

[3] In 2000 VKF45.. line was replaced by VKF46.. line.

2.7 Product replacements

Replacement of SQX.. / SQL.. actuators by SAX.. / SAL.. actuators.

Note
- When replacing actuators consider positioning force, torque and positioning times.
- Adjust in the controller the parameter "Running time" respectively "Positioning time", to ensure stable control.
- The replacement of accessory items needs to be taken into consideration also. In that case, compatibility is not necessarily ensured.

[1] Replace with rotary actuators SQK34.., SQK84.. (data sheet N4508) or SQK33.00 (data sheet N4506).

[2] Replace with rotary actuators SQK33.00 + ASK32

Note

D Rotary actuators SAL.. are not suited for mounting sets ASK24, ASK25, ASK31, ASK32, ASK33, ASK35, ASK40 and ASK41.

2.7.3 Electrical accessories

Notes

- If an auxiliary switch is required, its switching point should be indicated on the plant schematic.
- For media below 0 °C the stem heating element ASZ6.6 keeps the valve free from freezing.
- For this case, do not insulate the actuator bracket and the valve stem, as air circulation must be ensured!
- **Non-observance of the above may result in accidents and fires!**
- **Do not touch the hot parts without prior protective measures to avoid burns.**

2.8 Spare parts

The following spare part sets are available:

SAY.., SAX.., SAV..

Stock number 8000060843	Housing cover Screw (valve stem coupling) U-bracket	

Single components from the spare part sets are not available.

SAL..

Stock number 8000060844	Housing cover 2 adapters 1 pc. 14 mm / 1 pc. 11 mm 4 screws 2 pcs. M5 x 20 mm / 2 pcs. M6 x 20 mm	

Single components from the spare part sets are not available.

2.9 Sizing

2.9.1 Parallel operation of actuators

SA..31.. and SA..81..
3-position actuators must have one specific controller each, refer to "Connection diagrams" (page 90).

SA..61..
Up to 10 actuators can drive in parallel on a controller output with a rating of 1 mA. Modulating actuators have an input impedance of 100 kΩ.

SA..61../MO
The Modbus converter is designed for analog control on 0..10 V on the actuator side.
Note: Keep the setting of the analog signal on the actuator as is (switch 1 to "OFF"), adjustment is not allowed.

The actuators are factory-set to equal-percentage characteristic curve.
Note: The DIL switch (actuator-internal changeover of characteristic curve) must be set to "log" (switch 2 to "OFF").

2.9.2 Permissible cable lengths and wire cross-sectional areas

Cable lengths and wire cross-sectional areas depend on the following criteria of the actuators:
- Current draw
- Permissible voltage drop across the power supply lines

The control accuracy of the modulating actuators can be improved by using 4-wire connections, thus ensuring that voltage drops on G0 will not distort the positioning signal.
Note
When determining the cable length and the wire cross-sectional area, adherence to the permissible operating voltage tolerance at the actuator is of importance, in addition to the permissible voltage drop across the operating voltage and signal lines (see table below).

| Product no.	Operating voltage	Terminal	Max. permissible voltage drop
SA..31..	AC 230 V	N, Y1, Y2	2% each (total of 4%)
SA..61..	AC/DC 24 V	G0, G G0, Y, U	4% each (total of 8%) 1% each (at DC 0…10 V)
SA..81..		G, Y1, Y2	4% each (total of 8%)

The following criteria must be considered:
- With modulating control, the permissible positioning signal error must not exceed 1%, the reason being the voltage drop on the G0 wire.
- The voltage drop, caused by charging current peaks in the actuator's DC circuit, must not exceed 2 Vpp.
- If the G0 line is not correctly sized, load changes of the actuator due to changes of the DC voltage drop might lead to self-oscillations.
- The operating voltage drop at AC/DC 24 V may be a maximum of 8% (4% above the G0 wire).

Basic diagram − voltage drop across the power supply cables

The following diagram can be used to determine the cable lengths and wire cross-sectional areas.

L/P-diagram for AC/DC 24 V
Permissible cable length **L** as a function of power **P** and cross-sectional area of wire as a parameter

Note

P is the decisive power consumption of all actuators connected in parallel. When operating on AC 24 V, power consumption is in VA; when operating on DC 24 V, in W.

Formulas for wire lengths

Operating voltage	Permissible voltage drop / wire	Formula for wire length
AC 230 V	2% of AC 230 V	$L = 46 \cdot \dfrac{1313 \cdot A}{P}$ [m]
AC/DC 24 V	4% of AC 24 V	$L = \dfrac{1313 \cdot A}{P}$ [m]
	1% of DC 10 V	$L = \dfrac{5.47 \cdot A}{I(DC)}$ [m]

A   Cross-sectional area of wire in mm^2
L   Permissible wire length in m
P   Power consumption in VA (AC) or W (DC) (see actuator's rating plate)
I(DC)   DC current part (in A) on G0 wire

2.10 Warranty

The engineering data specified in chapter "Equipment combinations" (page 16) are only guaranteed in connection with the Siemens valves listed.
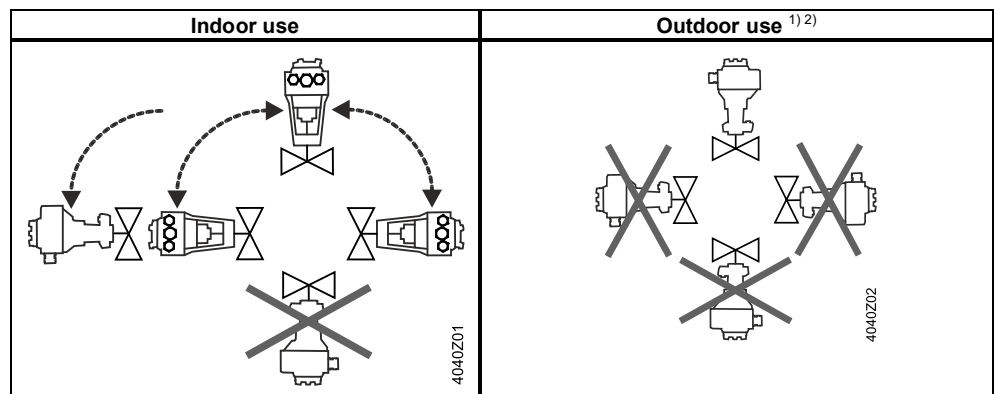

Note

When using the actuators in connection with valves of other manufacture, correct functioning must be ensured by the user, and Siemens will assume no responsibility.

On threaded valves it's possible that the actuator is missaligned on the valve due to a collision with the fitting. If so, please take care for correct mounting, either by turning the actuator or by adjusting the fitting (e.g. use a second sealing to change fitting position).

3.1.11 Fitting accessories

Special notes on mounting

Before fitting the accessory items shown below, the following steps must be performed:

SA..31..

⚠️	**Danger!**
	Danger to life from electrical current! There is an immediate risk of fatal injury in case of contact with live parts of SA..31... • Disconnect actuator from power.

1. Actuator is mechanically connected to a Siemens valve.
2. Observe compatibility and choice of combinations. Refer to "Accessories" (page 22).
3. Disconnect actuator from power.
4. Only required with actuators without fail safe function: Using the manual adjuster, drive the actuator's stem to the fully retracted position and fix the coupling. See "Manual operation" and "Fixing coupling" (page 79).
5. When mounting two different accessories watch out for correct plug-in space A or B (see below).
6. To fit an auxiliary switch, potentiometer or function module, the housing cover must be removed.
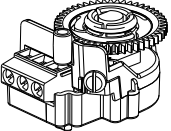

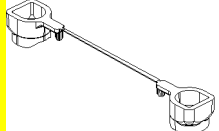

Interior view of setting elements and plug-in spaces

**Weather shield
ASK39.1**
First, observe "Special notes on mounting" (page 43).

Scope of delivery	
Weather shield ASK39.1	2 UV-proof cable ties

Notes

- To protect the actuator when used outdoors, the weather shield must always be fitted.
- If fitted several times, 2 UV-proof cable ties (800 x 4 mm) must be used.
- The manual adjuster cannot be used when the weather shield is mounted.
- SA..61../MO are not suitable for outdoor applications.
3.1.12 Wiring (installation)
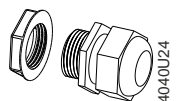

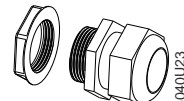

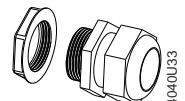

Conduct the electrical connections in accordance with local regulations on electrical installations as well as the "Connection diagrams" on page 88.

Preparation of wire endings

The cable endings must be prepared before as follows.
A	EU: M20 US: ½"	Standard	Connection actuator
B	EU: M25 US: ½"	Ground cable for outdoor installation	
C	EU: M20 US: ½"		Connection accessories

Cable glands (not contained in scope of delivery)		
Metric	Metric	Inch thread
M20	M25	½"
4040U24	4040U23	4040U33

Prior to installation, the following preconditions must be satisfied:
- Actuator is mechanically connected to a Siemens valve.
- Housing cover is removed (step 6 "Special notes on mounting", page 43).
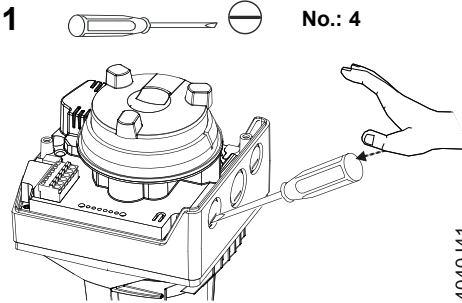

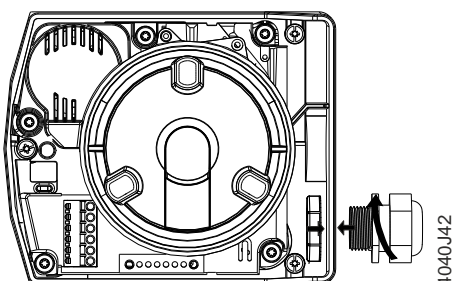

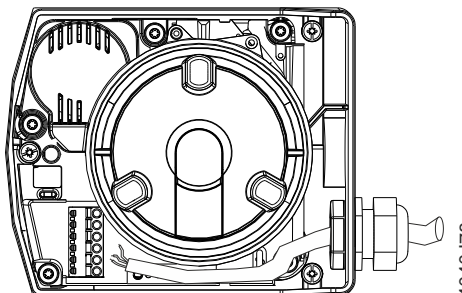

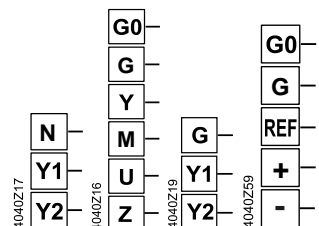

Communicating actuators

Device contains fixed connecting cable. Left cable duct used (A).

3.2 Commissioning and operation

3.2.1 Function check and Calibration

Mechanically

Before making the function check, the following preconditions must be satisfied:
- Environmental conditions specified in chapter "Technical data" (page 84)
- Actuator is mechanically connected to a Siemens valve
- **Actuator is in "Manual operation" mode** (page 80).

The actuator can be operated with the help of the "Manual adjuster" (see page 80).

Manual adjuster	Stroke actuator	Rotary actuator	Control path valve A→AB	Bypass valve B → AB
Turning in clockwise direction	Actuator's stem extends	Actuator's spindle turns in clockwise direction	Opening	Closing
Turning in counter-clockwise direction	Actuator's stem retracts	Actuator's spindle turns in counterclockwise direction	Closing	Opening

Notes

- Ensure that the actuator's and valve's stem, or actuator's and valve's spindle are securely connected in all positions.
- If the actuator is forced to travel beyond its end positions, overload protection responds.
- Observe information given in chapter "Acting direction and flow characteristic" on page 67.

Electrically

Before making the function check, the following preconditions must be satisfied:
- Environmental conditions specified in chapter "Technical data" (page 84).
- Actuator is mechanically connected to a Siemens valve.
- **Actuator is in "Automatic" mode** (page 80).
Actuator and, if required, accessories are correctly fitted and connected. Also refer to "Connection Terminals" (page 88)
- Power is applied.

SA..61..

Calibration is required with modulating actuators and SA..61.. before the function check.

General notes on calibration

Before making the calibration, the following preconditions must be satisfied:
- A description of the calibration function is given in chapter "Calibration" (page 69 for non-Modbus actuators, page 73 for Modbus actuators).
- Housing cover is removed (step 6 "Special notes on mounting", page 43).
If required, calibration can be repeated any number of times.

Make the function check for modulating actuators after the calibration with a point test according to the following table:

SAX61.03/03U, SAV61.00/00U and SAL61..

Connection terminals		Stroke actuator		Rotary actuator	Control path valve A→AB	Bypass valve B → AB	Position feedback U	
		log [1]	lin [1]				log [1]	lin [1]
Y	6 V 13,6 mA	Actuator's stem extends (60%)	Actuator's stem extends (82%)	Actuator's spindle turns in clockwise direction (60 %)	Opening	Closing	6 V	8,2 V
Y	5 V 12 mA	Actuator's stem retracts (50%)	Actuator's stem retracts (75%)	Actuator's spindle turns in counterclockwise direction (50 %)	Closing	Opening	5 V	7,5 V
Z connected to G		Actuator's stem extends		Actuator's spindle turns in clockwise direction	Opening	Closing	10 V	
Z connected to G0		Actuator's stem retracts		Actuator's spindle turns in counterclockwise direction	Closing	Opening	0 V	

[1] SAX61.03.. and SAV61.00.. factory setting **log,** SAL61.. factory setting **lin**

SAY61P.., SAX61P03.., SAV61P00...

Connection terminals		Stroke actuator		Rotary actuator	Control path valve A→AB	Bypass valve B → AB	Position feedback U	
		log [1]	lin [1]				log [1]	lin [1]
Y	6 V 13,6 mA	Actuator's stem retracts (30%)	Actuator's stem retracts (60%)	-	Opening	Closing	2.95 V	6 V
Y	5 V 12 mA	Actuator's stem extends (23%)	Actuator's stem extends (50%)	-	Closing	Opening	2.3 V	5 V
Z connected to G		Actuator's stem retracts		-	Opening	Closing	10 V	
Z connected to G0		Actuator's stem extends		-	Closing	Opening	0 V	

[1] SAY61P.., SAX61P.., SAV61P.. factory setting **log**

Make the function check for 3-position actuators according to the following table:

Connection terminals	Stroke actuator	Rotary actuator	Control path valve A→AB	Bypass valve B → AB
Voltage at Y1	Actuator's stem extends[1]	Actuator's spindle turns in clockwise direction	Opening	Closing
Voltage at Y2	Actuator's stem retracts[1]	Actuator's spindle turns in counter-clockwise direction	Closing	Opening
No voltage at Y1 and Y2	Actuator's stem maintains the position	Actuator's spindle maintains the position	Maintains the position	

[1] The opposite is true for SA...1P..

Notes
- If function module AZX61.1 is used, observe information given in chapter "Changeover of acting direction" (page 65).
- Observe information given in chapter "Acting direction and flow characteristic" on page 67.

Auxiliary switch
ASC10.51

4040U07
Make the function check for mounted auxiliary switches according to the following table – example switching point at 25% position:

Connection terminals		Stroke actuator	Rotary actuator	Terminal S1 – S3	Terminal S1 – S2
Voltage at Y2	Y = 0 V	Actuator's stem retracts (until end position is reached)	Actuator's spindle turns in counter-clockwise direction (until end position is reached)	-	-
No voltage at Y1 und Y2	Y = 0 V	Actuator's stem maintains the position	Actuator's spindle maintains the position	●—●	╱●—●
Voltage at Y1 for desired valve position % + 2% x positioning time **Example:** SAX31.00 = 27% x 120 sec = 32.5 sec	Valve position % + 2% Y = 2.7 V	Actuator's stem extends to desired position (27%)	Actuator's spindle turns in clockwise direction to desired position (27%)	╱●—●	●—●
Check switching point with voltmeter		Actuator's stem maintains the position	Actuator's spindle maintains the position	-	-

Potentiometer ASZ7.5

4040U08
Make the function check for mounted potentiometer according to the following table (Example values for ASZ7.5):
First, observe "Notes on ASZ7.5" (page 22).

Connection terminals	Stroke actuator	Rotary actuator	Terminal P1 – P2	Terminal P2 – P3
Voltage at Y2	Actuator's stem retracts (until end position is reached)	Actuator's spindle turns in counter-clockwise direction (until end position is reached)	-	-
No voltage at Y1 und Y2	Actuator's stem maintains the position	Actuator's spindle maintains the position	< 1 Ω	> 996 Ω
Voltage at Y1 for desired valve position % positioning time **Example:** SAX31.00 = 75% x 120 sec = 90 sec	Actuator's stem extends to desired position (75%)	Actuator's spindle turns in clockwise direction to desired position (75%)	-	-
Check position value with ohmmeter	Actuator's stem maintains the position	Actuator's spindle maintains the position	~ 560 Ω	~ 436 Ω
Voltage at Y2 for desired change of valve position % x positioning time **Example:** SAX31.00 = 10% x 120 sec = 12 sec	Actuator's stem retracts to desired position (65%)	Actuator's spindle turns in counter-clockwise to desired position (65%)	-	-
Check position value with ohmmeter	Actuator's stem maintains the position	Actuator's spindle maintains the position	~ 485 Ω	~ 511 Ω

3.2.2   Commissioning Modbus RTU

The devices were developed specifically for use with Climatix push-button configuration as described in document CE1A3975 [1].
As an alternative, the bus can be configured via the local HMI; see Section **User interface**, pg. 57.
Check the following during commissioning:
- Bus configuration (address, baud rate, type of transmission and optional termination). Standard address 255 allows for installation and commissioning of several actuators simultaneously without mutual interference.
- The actuator parameters (direction for opening, position limits, position adjustment etc.) can be read via the Modbus register.

[1] Documents can be downloaded at http://www.siemens.com/bt/download

Full or partial configuration via bus

The actuators can be configured via bus connection if the settings prior to commissioning allow for a connection to the Modbus master/programming tool (no address conflicts and correct baud rates/transmission format settings).
- Full configuration via bus: With a unique Modbus address, a connection can be established from Modbus master/programming tool following startup by means of the preset transmission format and baud rate (or auto-baud).
- Partial configuration via bus: If the Modbus address is not unique, it must first be set to a unique value, either by using the address input with push button (cf. page 58) or by setting the address to 246 with push button press > 5s und < 10s (cf. page 57). Full configuration via bus: With a unique Modbus address, a connection can be established from Modbus master/programming tool following startup by means of the preset transmission format and baud rate (or auto-baud)..

With an existing connection, the bus and actuator parameters can be set to target values via the bus. During write access to the bus parameters,
"1 = Load" must be written to register 768 within 30 seconds to ensure the changes are not discarded.

Example: The table shows the register values before and after the change via bus access.

Reg.	Name	Before change	After change
764	Modbus address	246	12
765	Baud rate	0 = auto	1 = 9600
766	Transmission format	0 = 1-8-E-1	3 = 1-8-N-2
767	Bus termination	0 = Off	0 = Off
768	Bus conf. command	0 = Ready	1 = Load

User interface
Push Button   LED

Pushbutton operation

Action	Pushbutton operation	Feedback message
Current Modbus address (starting from lowest address position)	Button pressure < 1s	1st digit: red 2nd digit: green 3rd digit: orange The LED blinks blue once after address indication and when bus termination is On Example: 124 = 4x red, 2x green, 1x orange
Switches bus termination On/Off		
Switch-on 1. Press button 3x		Blinking or flickering of LED stops (termination mode)
2. Press button 1x briefly		Blue LED blinks once
3. Press button until the LED turns red		RED LED is lit (confirmation)
4. Release button		LED not lit Address is indicated LED blinks blue once following address indication Device enters normal mode
Switch-off 1. Press button 3x		Blinking or flickering of LED stops (termination mode)
2. Press button until the LED turns red		RED LED is lit (confirmation)
3. Release button		Device enters normal mode
Enter Modbus address using pushbutton	Press button > 1s and < 5s	See "Enter address using pushbutton", page 58
Enable pushbutton addressing (together with Climatix™ controllers)	1. Press button > 5s and < 10s 2. Release button	Red LED is lit and goes off after 5 s Orange LED is lit
Reset to factory settings	Press button > 10s	Orange LED blinking

LED Farben und Blinkmuster

Color	Blinking pattern	Description
Green	1s On / 5s Off	Normal mode without bus traffic
	Flickering	Normal mode with bus traffic
Orange / green	1s orange / 1s green	Device is in override control mode
Orange	1s On / 1s Off	Bus parameter not yet configured
	1s On / 5s Off	Device is in backup mode
Red	Permanently lit	Mechanical error, device blocked, manual intervention or calibration
	1s On / 5s Off	Internal error
	0.1s On / 1s Off	Invalid configuration, e.g. Min = Max
Blue	Flickering once after address indication	Bus termination active
Dark	Dark	Fail safe function activated[1] or no power applied

[1]   Only for SA..61../MO

Reset actuator with pushbutton	1. Press button >10s → LED blinking **orange** 2. Release button *while* blinking → LED blinking for another 3s 3. Reset is interrupted if the pushbutton is pressed *during* the 3s 4. After 3s, → LED is lit **red** (reset) while the device restarts.

Enter address using pushbutton	The Modbus address can be set without extra tool by means of pushbutton addressing. To display the current Modbus address, press the button <1s.

Enter new address (starting from the lowest address position)

Colors		
1st digit: **red**	2nd digit: **green**	3rd digit: **orange**
Example for address 124:		
LED		
Note	The address is entered and displayed beginning at the lowest digit (1st digit), see figure above. (Example: 124 starts with 4x red)	

Enter new address (starting from lowest address position)	1. **Enable addressing mode**: Press button > 1s until the LED is **red**, then release button (before LED goes off). 2. **Enter the numbers**: Push button n-times → LED blinks each time the button is pressed as a feedback. Colors: 1st digit: **red** / 2nd digit: **green** / 3rd digit: **orange** 3. **Save digits:** Press button until LED is lit in the color of the next digit, then release the button, 4. **Save address**: Press button until LED is **red** (confirmation) →, then release button. An address can be saved any time, i.e., after entering the 1st digit or after entering the1st digit and 2nd digit. 5. The entered address is displayed again 1x for confirmation. **Note**: Address entry is interrupted when the button is released before the LED is red, address entry is interrupted.

Example	Set address "124": 1. Enable addressing mode 2. Enter the 1st digit: Press button 4x → LED blinks **red** each time the button is pressed 3. Save 1st digit: Press button until LED is **green** – release button 4. Enter the 2nd digit: Press button 2x → LED blinks **green** each time the button is pressed 5. Save 2nd digit: Press button until LED is **orange** – release button 6. Enter the 3rd digit: Press button 1x → LED blinks **orange** each time the button is pressed 7. Save address: Press button until LED is **red** – release button → The address is saved and displayed 1x for confirmation

2. Enter the 1st digit: Press button 5x → LED blinks **red** each time the button is pressed
   Save address: Press button until LED is **red** – release button
   → The address is saved and displayed 1x for confirmation

3.2.3 Maintenance

The actuators are maintenance-free.

3.2.4 Disposal

	The device is considered electrical and electronic equipment for disposal in terms of the applicable European Directive and may not be disposed of as domestic garbage. • Dispose of the device through channels provided for this purpose. • Comply with all local and currently applicable laws and regulations.

4 Functions and control

4.1 3-position control
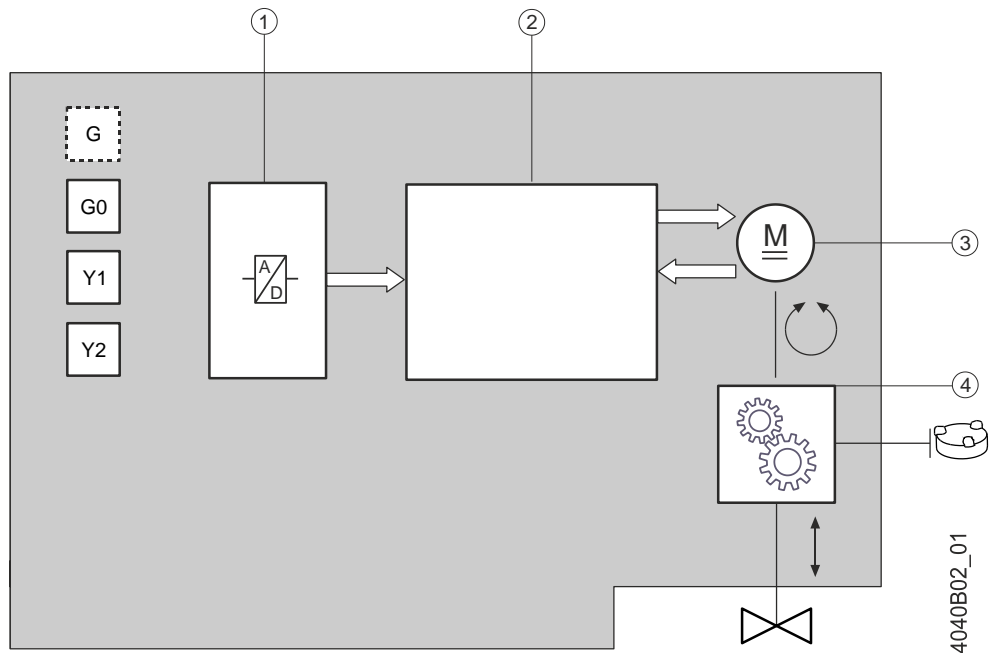

A 3-position signal drives the actuator via connection terminals Y1 or Y2. The required position is transferred to the valve.

1	A/D conversion	
2	Control functions	Identification of seat
		Control of direction
		Motor control
		Manual adjustment
3	Brushless DC motor	
4	Gear train	
⌷	Manual adjuster	

Positioning signal	Stroke actuator	Rotary actuator	Control path valve A→AB	Bypass valve B → AB
Voltage at Y1	Actuator's stem extends[1]	Actuator's spindle turns in clockwise direction	Opening	Closing
Voltage at Y2	Actuator's stem retracts[1]	Actuator's spindle turns in counter-clockwise direction	Closing	Opening
No voltage at Y1 and Y2	Actuator's stem maintains the position	Actuator's spindle maintains the position	Maintains the position	
Voltage at Y1 and Y2	Actuator's stem maintains the position	Actuator's spindle maintains the position	Maintains the position	

[1] The opposite is true for SA…1P..

Note

Observe information given in chapter "Acting direction and flow characteristic" on page 67.
Internal control ensures very constant positioning times and determination of the actuator's position.

Siemens
Smart Infrastructure

Actuators SAX.., SAY.., SAV.., SAL.. for valves
Functions and control

CE1P4040en
2024-04-11

Positioning times stroke model

The specified positioning times refer to the respective nominal stroke / nominal angular rotation. Since the end positions of rotary actuators are inside the actuator, the following remarks refer to stroke actuators.
The resulting effective strokes vary, depending on the type of valve, resulting in shorter or longer actuator positioning times.

Legend diagram	
A	Mechanical end position in SAX.. / SAV..
B	VVF.. / VXF.. valves with 20 / 40 mm nominal stroke = k_{vs}- value reached
A…B	Internal end position of VVF.. / VXF.. valves with 20 / 40 mm nominal stroke

Notes

Deviations occur…
- after several positioning signals Y1 and Y2 in the same direction since the stroke movement starts with a delay of 300 ms.
- when positioning signals Y1 and Y2 are active for less than 300 ms since the stroke movement cannot be made in that case.

A	B	C	Y1	Y2	0
Calculated position	Actual position	Positioning time [ms]	Positioning signals (power applied)		No power applied
Notes

Accurate position feedback is made possible with the help of a potentiometer (page 82).

4.1.1 Combination with RVD.. controller for direct domestic hot water distribution by heat exchanger

The design based slow reaction on control signals of SAX31.., SAX81.., SAV31.., SAV81.., SAY31.., SAY81.., SAL31.. und SAL81.. actuators doesn't allow the actuator to react on very short control pulses. Only control pulses with a length greater than 300 ms allow a sufficient reaction.

Especially the direct domestic hot water control does not allow such long control pulses. The specific optimized control loops – equipped with an SIGMAGYR RVD.. controller and Acvatix SQS359.05 actuator– work with pulses down to 40 ms.

the actuators mentioned above are not able to work with these short pulses.
The following table gives alternatives which actuators can be used within these control loops.

Controller	Plant type	Prefered actuator	Valve line	DN	kvs
RVD130 [1] RVD135/109 [1] RVD135/309 [1] RVD140 RVD144/109 RVD145/109 RVD139 [1]	4 and 5	SQS35.53 [1] SAS31.53 [1]	VVG44..	DN15 ..40	0.25 .. 25

4.2 Modulating control
The positioning signal range (DC 0...10 V / DC 4...20 mA, 0...1000 Ω) corresponds in a linear manner to the positioning range (fully closed...fully open, or 0…100 % stroke).

The actuator is driven via connection terminal Y or forced control Z (page 72). The required stroke / rotation is transferred to the valve's stem / spindle.

Selecting the acting direction

- With valves whose stem is extended in the fully closed position, "direct acting" means that the actuator's stem is retracted when positioning signal Y = 0 V resp. Z = 0 Ω. This applies to all Siemens valves according to "Equipment combinations" (page 16).
- With valves whose stem is retracted in the fully closed position, "direct acting" means that the actuator's stem is extended when positioning signal Y = 0 V resp. Z = 0 Ω.

4.5 Acting direction and flow characteristic
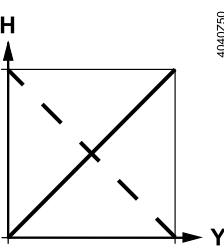

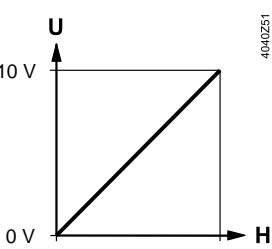

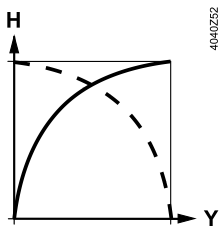

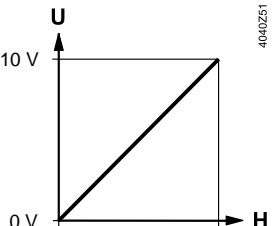

The selection of changeover of acting direction and characteristic with the DIL switches of the function module AZX61.1 depends on the type of actuator (with or without fail safe function) and the associated type of valve (valve characteristic, push to open, pull to open).
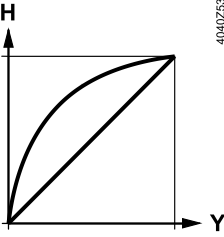

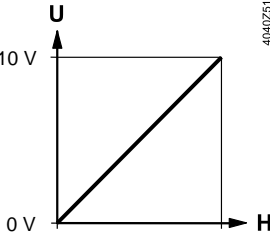

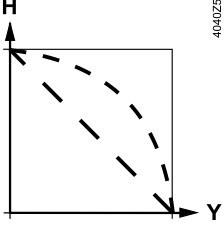

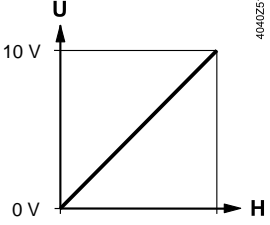

When the positioning signal increases (DC 0…10 V, DC 4…20 mA, 0...1000 Ω), the objective is to have the valve's volumetric flow V rising, but to fully open the valve, V = 100 % (NO = normally open), or to fully close it, V = 0 % (NC = normally closed) in the event of a power failure.

			Direct		Reverse	
	DIL switches	Acting direction	Direct		Reverse	
		Flow characteristic	Linear	Equal-percentage	Linear	Equal-percentage
	Without fail safe function	No power applied	Maintains the position			

4.6 Position Feedback U

The position feedback U (DC 0...10 V) is always proportional to stroke H of the actuator's stem.

		Actuator Positioning signal Y, Z	Actuator Position feedback U
ON 1 2	log = equal-percentage		
ON 1 2	lin = linear		

	Actuator Positioning signal Y, Z	Actuator Position feedback U
Direct acting	 4040Z53	 4040Z51
Reverse acting	 4040Z54	 4040Z51
Y, Z	Positioning signal	
H	Stroke	
U	Position feedback	
————	Acting direction: direct	
— — —	Acting direction: reverse	

4.7 Position control with ClosedPosition-Synchronization

Within SAX/SAV/SAL61/SAY61.. actuators the position control works based on the HALL-sensor pulses from the brushless DC-motor calculating with an internal stroke model calculating the actual position. This kind of control is more accurate and wearless compared with a physical element for position measurement and grants a precise position control with high resolution.

During manual operation the motor is declutched from the gear train and the internal position control get's not sensor pulses. So real position will deviate from the internally calculated position. As a consequence the position feedback on terminal U is set to "0V" during manual operation.

To grant – after manual operation – that real mechanical position and internal position control are matching all SA..61.. operate after manual operation an automatic ClosedPosition-Synchronization.

4.7.1 ClosedPosition-Synchronization

Returned into automatic operation the actuator runs for 0.5.. 2 s into opening direction to grant secure closed-position detection. Then the actuator runs into closed position (seat A-AB in the valve). Reaching the closed position the internal stroke model is synchronized. Positioning signal, position feedback and mechanical position now match perfectly again.
With this function it's granted that the position feedback U – which was zero during manual operation and synchronization - always represents the real mechanical position of the actuator.

After synchronization the actuator follows the control signal again.
4.7.1.1 Active forced position input on Z

If after return to automatic mode a signal on Z is active (GND, AC/DC 24 V or
0…1000 Ohm) the ClosedPosition-Synchronization is deactivated as long as the
signal on Z remains.
After Z is deactivated the ClosedPosition-Synchronization will be performed.

Note

ClosedPosition-Synchronization is only automatically activated after manual
operation. A power failure does not activate this function automatically, to avoid that
all actuators in a section close in parallel.

If the customer likes synchronization also after a power failure he should take care
that the plant restarting routine drives the actuator automatically into an end
position. This will also synchronize the internal position control and the real
position.

4.8 Calibration

To match the actuator to production-related mechanical tolerances of the individual
valves, accurate positioning and position feedback must be ensured, if calibration
is performed when the plant is commissioned (page 53). During commissioning,
the actuator detects the valve's end positions and files the exact stroke in its
internal memory.

Calibration takes place in the following phases:

- Actuator drives to H_0 (1), valve closes. Detection
  of upper end position.
- Actuator drives to H_{100} (2), valve opens.
  Detection of lower end position.
- The detected values are stored (3). Then the
  actuator follows the positioning signal.
Note

- Observe status indication (actuator LED) during and after calibration (page 81).
- If the actuator does not detect the second end position within an appropriate stroke range (SAX.., SAY.. max. 25 mm; SAV.. max. 45 mm), the first end stop will be adopted and the actuator operates with a working range of 20 mm, respectively 40 mm.

4.9 Signal priorities

The actuators are controlled via different interlinked positioning signal paths (positioning signal "Y", forced control input "Z", manual adjuster). The signal paths are assigned the following priorities:

Priority	Description	
1 (highest)	The manual adjuster always has priority 1, thus overriding all signals active at "Z" or "Y", independent of whether or not power is applied.	
2	Only SA..61..: As soon as a valid positioning signal is active at input "Z", the position is determined via positioning signal "Z" (forced control). Prerequisite: The manual adjuster is not used.	**Z**
3 (lowest)	The position is determined via positioning signal "Y". The manual adjuster is not used and on Z there is no active signal.	**Y**

Examples

Manual adjuster	Forced control (Z)	Positioning signal (Y)	Stroke actuator	Rotary actuator
Automatic mode	Not connected	**5 V**	Actuator's stem travels to position (50%)	Actuator's spindle travels to position (50%)
Automatic mode	**G**	3 V	Actuator's stem extends	Actuator's spindle turns in clockwise direction
Automatic mode	**G0**	3 V	Actuator's stem retracts	Actuator's spindle turns in counter-clockwise direction
Operated (30%) and engaged	G	8 V	Actuator's stem retracts manual (to 30%)	Actuator's spindle turns manual in counterclock-wise direction (to 30%)

Bold printing = positioning signal currently active

4.10 Detection of valve seat

The actuators feature force-dependent valve seat detection. After calibration, the exact valve stroke is filed in the actuator's memory. When the actuator reaches the respective end of stroke, it does not hit the valve's seat at full speed, but stops for 5 seconds at about 1% before the stored position is reached. If the positioning signal stays at 0% or 100%, the actuator travels to the calculated end position at reduced positioning speed and builds up the required nominal force.
This function extends the actuator's service life since the dynamic forces are reduced when approaching the valve seat and there will be less strain on the gear train.
In addition, the actuator's oscillations in the case of instable control are suppressed.
If no force is built up in the calculated end position (e.g. in the event of temperature effects for instance), the actuator continues to operate at a reduced positioning speed until the nominal positioning force is restored. This ensures that the valve always fully closes.
After a power failure, valve seat identification is not active – the actuators define their stroke position on power resoration to be at 50%. From now on, the actuator follows the positioning signal.
When the valve plug reaches its seat for the first time, the actuator readjusts its stroke model.

| Example | The supposed position is 50%, Y = 2 V, the actuator travels 30% of the stored valve stroke in the direction of "Actuator's stem retracted".
If the actuator reaches the seat within this 30% travel, it interprets the position as "Valve fully closed" and shifts the position of the valve's stroke accordingly without changing the extent of travel.
From now on, the actuator follows the changed valve stroke position.
This means: New position 0%, Y = 2 V, actuator travels 20% of the stored valve stroke in the direction "Actuator's stem extended". |
|---|---|
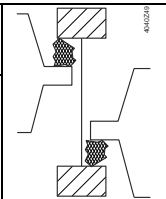

4.11 Detection of foreign bodies

The actuator detects when the valve is clogged and adjusts its operational behavior accordingly to prevent damage to itself or the valve.
If the actuator hits an obstacle within the calibrated stroke and is not able to overcome it with its nominal positioning force, it stores the position at which the obstacle was hit. Depending on the direction of travel, as …

• "Lower limit of valve clogging", if the clogging was detected when traveling in the direction of "Actuator's stem retracting". • "Upper limit of valve clogging", if the clogging was detected when traveling in the direction of "Actuator's stem extending".	

Now, the actuator status LED blinks green and the actuator only follows the positioning signal between the positions "Actuator's stem retracted" and "Upper limit of valve clogging" or "Actuator's stem extended" and "Lower limit of valve clogging".
After detection of clogging, 3 attempts are made to overcome clogging by traveling about 15% in the opposite direction and then trying again to overcome the position of clogging. If the attempts made are unsuccessful, the actuator continues to follow the positioning signal within the restricted range only and the actuator LED continues to blink green (refer to "Indicators" on page 81).

4.12 Forced control Z

Forced control is affected by changeover of acting direction. It uses the following operating modes:

	Z-mode			
	No function	Fully open	Fully closed	Overriding positioning signal "Y" by 0…1000 Ω
Connections	G0 G Y M U Z 4040241	G0 G Y M U Z 4040238	G0 G Y M U Z 4040239	G0 G Y M U Z R 4040240
Transmission				
	Equal-percentage or linear characteristic			Equal-percentage or linear characteristic
	Contact "Z" not connected, valve follows positioning signal "Y"	Contact "Z" is connected directly to "G", positiong signal "Y" has no impact	Contact "Z" is connected directly to "G0", positiong signal "Y" has no impact	Contact "Z" is connected to "M" via resistor "R", starting point at 50 Ω, end point at 900 Ω, positioning signal "Y" has no impact

Note

The operating modes "Z" shown are based on factory setting "direct acting" and a "push to open" valve.

4.13 Communicating actuators Modbus RTU

4.13.1 Detection of valve seat

The actuators feature force-dependent valve seat detection. After calibration, the exact valve stroke is filed in the actuator's memory. When the actuator reaches the respective end of stroke, it does not hit the valve's seat at full speed, but stops for 5 seconds at about 1% before the stored position is reached. If the positioning signal stays at 0% or 100%, the actuator travels to the calculated end position at reduced positioning speed and builds up the required nominal force.

This function extends the actuator's service life since the dynamic forces are reduced when approaching the valve seat and there will be less strain on the gear train.

In addition, the actuator's oscillations in the case of instable control are suppressed.

If no force is built up in the calculated end position (e.g. in the event of temperature effects for instance), the actuator continues to operate at a reduced positioning speed until the nominal positioning force is restored. This ensures that the valve always fully closes.

Siemens
Smart Infrastructure

Actuators SAX.., SAY.., SAV.., SAL.. for valves
Functions and control

CE1P4040en
2024-04-11

After a power failure, valve seat identification is not active – the actuators without fail safe function define their stroke position upon return of power at 50% and automatically set their internal setpoint in register 1 to the startup setpoint (register 516). The actuator closes at this setting. There is a short-term deviation between the setpoint and the internal stroke position.

When the valve plug reaches each seat for the first time, the actuator readjusts its stroke mode.

Example
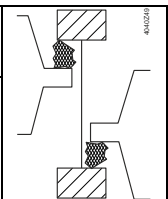

Setpoint prior to power outage 35%, no manual adjustment during the power outage. Internal stroke position value after return of power 50%. Internal setpoint after return of power equal to startup setpoint (register 516, here 0%). The actuator moves 35% in the direction of "Retract actuator stem" and reaches the valve seat (if the setpoint has not been changed in the meantime). The internal stroke position is set to 0%.

The actuator now follows the changed valve stroke position effective immediately.

4.13.2 Detection of foreign bodies

The actuator detects when the valve is clogged and adjusts its operational behavior accordingly to prevent damage to itself or the valve.
If the actuator hits an obstacle within the calibrated stroke and is not able to overcome it with its nominal positioning force, it stores the position at which the obstacle was hit. Depending on the direction of travel, as …

|	
• "Lower limit of valve clogging", if the clogging was detected when traveling in the direction of "Actuator's stem retracting".	
• "Upper limit of valve clogging", if the clogging was detected when traveling in the direction of "Actuator's stem extending".	

Now, the actuator status LED blinks green and the actuator only follows the positioning signal between the positions "Actuator's stem retracted" and "Upper limit of valve clogging" or "Actuator's stem extended" and "Lower limit of valve clogging".

After detection of clogging, 3 attempts are made to overcome clogging by traveling about 15% in the opposite direction and then trying again to overcome the position of clogging. If the attempts made are unsuccessful, the actuator continues to follow the positioning signal within the restricted range only and the actuator LED continues to blink green (refer to "Indicators" on page 81).

As long as the external setpoint is greater than the position of the high limit valve clogging, the deviation between the setpoint and position feedback in register 769 is displayed with the warning "Mechanical error, device blocked, manual intervention or calibration." The LED on the cable adapter is red. The warning is reset if the external setpoint drops below the high limit valve clogging, since the setpoint and stroke position are once again the same. The LED on the cable adapter switches to green blinking (=communication).

4.13.3 Calibration

To match the actuator to production-related mechanical tolerances of the individual valves, accurate positioning and position feedback must be ensured, if calibration is performed when the plant is commissioned (page 53). During commissioning,

Siemens
Smart Infrastructure

Actuators SAX.., SAY.., SAV.., SAL.. for valves
Functions and control

CE1P4040en
2024-04-11

the actuator detects the valve's end positions and files the exact stroke in its internal memory.

Calibration takes place in the following phases:

- Actuator drives to H_0 (1), valve closes. Detection of upper end position.
- Actuator drives to H_{100} (2), valve opens. Detection of lower end position.
- The detected values are stored (3). Then the actuator follows the positioning signal.
- If the actuator does not detect the second end position within an appropriate stroke range (max. 25 mm), the first end stop will be adopted and the actuator operates with a working range of 20 mm.
The internal position feedback is set to 0% during calibration. For a setpoint > 0%, the actuator detects calibration based on the deviation between setpoint and stroke position and reports this in Register 769 with the warning "Mechanical error, device blocked, manual intervention or calibration". The LED on the actuator cover blinks green, the LED on the cable adapter is red.

After calibration is completed, the actuator follows the external setpoint, the warning is reset, the LED on the cover changes to continuous green and the cable adapter blinks green (communication active).

Note
Observe status indication (LED) during and after calibration (page 81). The calibration cannot be started via the bus.

4.13.4 Manual adjustment

The actuator's internal stroke position measurement is inactive during manual adjustment.

The position feedback changes to 0% once the manual adjuster is pressed and remains on the value during manual adjustment. The actuator detects manual action based on the deviation between the setpoint and the stroke position and after 10 seconds reports in register 769 with the warning "Mechanical error, device blocked, manual intervention or calibration". The LED on the actuator cover blinks green, the LED on the cable adapter is red.

Upon return to automatic mode, the actuator synchronizes to stroke position 0%. After the synchronization, the actuator follows the pending setpoint, the LED on the cover changes to continuous green and, on the cable adapter, blinking green (communication active). The warning in register 769 is reset.

Function codes	
03 (0x03)	Read Holding Registers
04 (0x04)	Read Input Registers
06 (0x06)	Write Single Register
16 (0x10)	Write Multiple Registers (Limitation: Max. 120 registers on one write access)

4.13.6 Function description

Register 1 / 3 "Setpoint / actual value"

The setpoint of the controller for the position to move to, 0…100% stroke/angle of rotation, resolution 0.01, i.e. 0% = 0 and 100% = 10000.
The actual value reported by the device, with the same resolution.

Siemens
Smart Infrastructure

Actuators SAX.., SAY.., SAV.., SAL.. for valves
Functions and control

CE1P4040en
2024-04-11

| **Register 2** "Override control" | The actuator can be operated in override control for commissioning / maintenance purposes or system-wide functions (e.g. night-cooling). |

- Manual override: When the manual adjuster is used, a mechanical jam will be detected if a mismatch between setpoint and actual position persists for more than 10s.
- Remote override: The actuator enters this state when an override command is sent over the bus.
- Available commands:
    - Extend / Retract
    - Stop (with braking distance compensation)

Register 256
"Restarting the device"

Restarting is possible by:
- Power-reset (turning operating voltage off and on) or
- "Reinitialize" command.

→ Device re-initializes and sets all process values except actual value (= 50%) and setpoint (= startup setpoint) to defaults.

Register 256
"Self test"

When triggered, the self test drives the actuator to the detected limits and sets the flags in register 769 according to the result (bit 09 = 1→"failed" or bit 10 = 1 → "passed").

The self test is not passed when the limits were not reached from the lower end (results in jam). If the Min/Max limits can be exceeded, the self test is not evaluated as failed.

Notes

- The self test can only be performed if bit 4 = 0 in register 769 "Status", meaning there is concurrently no clogging or manual operation.
- If clogging/a blockade occurs during the self test, the test is failed, even if the device clears it within 3 tries.

Register 264
"Tolerance blockade monitoring"

Register 256
"Reset"

The actuator supports the following re-initialization / reset behaviour:
- Local reset by push-button
- Remote reset: Using "Remote-Reset" command.

Effect of reset:
- Process values except actual value and setpoint: set to ex-works default values.
- Network parameters (register 513…516 and 764…768) are reset only in case of local reset, not by remote reset (otherwise loss of communication).
- Not reset are: Counters, device info, and factory data.

Register 259
"Operating mode"

Read value only, set to „Position control" for valve actuators.

Register 260 / 261
"Minimum and maximum position"

Electronic positioning limitation

Register 262
"Actuator runtime"

Read value only, positioning time from one stop to another.

Register 263
"Positioning signal characteristic betw. Y and U"

Depending on the valve type, this function can be used to compensate a logarithmic characteristic, in order to achieve a linear input/output signal relation (cf. "Parameter" table, page 75).

If the setpoint does not reach the tolerance limit set within this parameter, bit 4 is set in register 769 "Status" and can be used for alarming in the building automation system.

Register 513…515
"Backup mode"

In case the communication to the controller is lost, the device can be configured to go into a defined state.

- Waiting time to recognize communication loss → Register 515
- Reaction:
    - Go to a predefined backup position → Register 514
    - Deactivated (factory setting): "keep last setpoint", i.e. in case of communication loss, the device controls to the last received setpoint, until a new valid setpoint is received.

In this parameter a setpoint can be defined, which the actuator moves to at first commissioning or after a power reset, before receiving a new valid setpoint.

Register 764…766
"Modbus configuration"

Configuring the RS-485 address and transmission parameters

Register 767
"Bus termination"

Electronically switchable 120 Ω resistance for bus termination

Register 768
"Bus config.
Command"

If the parameters in registers 764…766 „Modbus configuration" are changed via bus, they are only saved if the function "Load" is called within 60 seconds in this register. Otherwise, all changes are discarded.

Register 516
"Startup setpoint"

Register 769 "Status"

Status			
Bit 00	1 = Not available	Bit 06	1 = Not available
Bit 01	1 = Backup mode active	Bit 07	1 = Not available
Bit 02	1 = Not available	Bit 08	1 = Not available
Bit 03	1 = Not available	Bit 09	1 = Self test failed
Bit 04	1 = Mechanical error, device blocked, manual intervention[1] or calibration[1]	Bit 10	1 = Self test successful
Bit 05	1 = Not available	Bit 11	1 = Not available

[1] After 10 seconds

4.14 Technical and mechanical design

4.14.1 Transmission of power

Function principle

Incoming positioning signals are translated to positioning commands for the motor.

A gear train transmits the motor's positioning steps to the output stage (valve coupling). Attached to the gear train are the electrical and mechanical accessory items and the manual adjuster.

In the case of the rotary actuators, the adjustment to the required torque is made in the output stage. With the stroke actuators, the translation from rotary to stroke movement takes place in the output stage.

SAL..

SAX.., SAV..

Actuator's stem retracted / valve fully closed	Actuator's stem extended / valve fully open

4.14.2 Coupling

Siemens
Smart Infrastructure

Actuators SAX.., SAY.., SAV.., SAL.. for valves
Functions and control

CE1P4040en
2024-04-11

SAX.., SAV..	SAL..
The stem coupling (1) and neck coupling (2) ensures full backward compatibility with all types of Siemens large-stroke valves produced since 1975.	Mounting sets are available for use with butterfly and slipper valves.

4.14.3 Manual adjuster

Automatic

When the motor drives the manual adjuster turns. Thus in automatic mode, the manual adjuster is used for indication of travel. If the manual adjuster is held firm in this mode, there is no transmission of power to the gear train.

Manual operation

When pushing the manual adjuster down (1), it engages and the actuator can be manually operated.

Stroke actuator: When turning the manual adjuster in clockwise / counterclockwise direction (2), the actuator's stem retracts / extends.

Rotary actuator: The actuator spindle turns in the same direction.

An overload protection prevents damage to the manual adjuster

Fixing the position

Upon actuation and locking the slide switch, the manual adjuster remains engaged.

When in this mode, do not turn the manual adjuster.

Disengaging the fixing

When resetting the slide switch, the manual adjuster returns to automatic mode.
->The modulating SA..61.. will automatically start a Zero Position Synchronization

4.14.4   Indicators

A	Indication of travel	
B	Scale	Position indication
C	Indicator	
D	LED Status indication	
Operational status indication

In Automatic mode, the manual adjuster serves for the indication of travel. See "Automatic" (page 80).

Position indication

Position indication is on 2 opposite sides. When turning the manual adjuster, the indicator moves in the same direction.

The scale indicates the stroke. When reaching the stops, the valve is either fully open or fully closed.

Status indication (LED)

Housing cover fitted	Housing cover removed
When the housing cover is fitted, the LED can be viewed through a light conductor.	When the housing cover is removed, the LED can be viewed through a hole.
The status indication informs about the operational state of the actuator.

LED	Indication	Operating state	Remarks, troubleshooting
Green	On	Automatic mode	Normal operation
	Blinking	Calibration (page 53).	Wait until calibration is finished (then green or red light)
		In manual mode	Manual adjuster in MAN position
		Detection of foreign bodies (page 71 / page 73).	Check valve / actuator
Red	On	Undervoltage	Check voltage
		Maximum stroke exceeded	Start calibration again (page 53). If error re-occurs immediately: actuator faulty.
	Blinking	Calibration error	Start calibration again. If error re-occurs immediately: check valve
		Clogged valve	
Dark	Dark	No power or electronics faulty	Check operating voltage

4.14.5 Electrical accessories

Auxiliary switch ASC10.51

The auxiliary switch ASC10.51 switches on or off when a certain position is reached. The switching point can be set between 0…100%.

Switching point for S1–S2 and S1–S3 cannot be set separately. If S1–S2 is open then S1–S3 is closed.
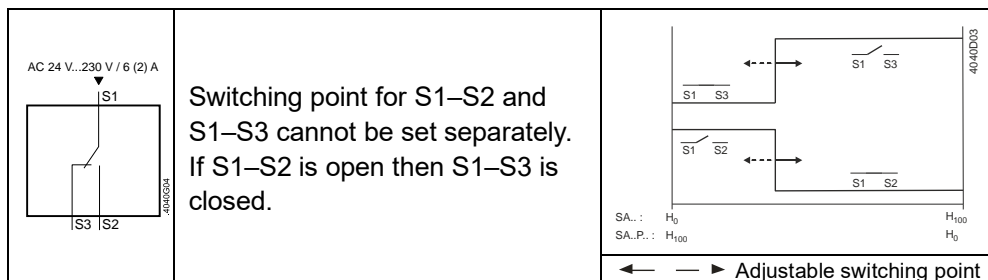

Application example:

When using an auxiliary switch, position feedback can trigger an automatic stop of the circulating pump in the end position "Fully closed".

Potentiometer ASZ7.5/..
Potentiometer ASZ7.5 delivers an ohmic value to the controller giving the exact position of the actuator (continuous position feedback). A slip clutch prevents damage to the potentiometer in the mechanical end positions. This is also used for accurate balancing of the potentiometer in the fully closed position.

Ohmic value between P2-P1 increases with stroke H or rotation, ohmic value between P2-P3 decreases.
Flow characteristic

The end values of the potentiometers refer to the maximum stroke / maximum angular rotation of the actuators. For this reason, the resulting values in operation deviate, depending on the type of valve used in combination with the actuator. The potentiometer's starting point can be very accurately adjusted during installation (refer page 44).

	ASZ7.5
	770 Ohm at nominal stroke/nominal angular rotation
	R = 0 + 7.7 Ohm x nominal stroke/nominal angular rotation (%)
SAX..	R = 0 + 38.5 Ohm x stroke (mm)
SAV..	R = 0 + 19.3 Ohm x stroke (mm)
SAL..	R = 0 + 8.55 Ohm x rotary angle (°)
Function module AZX61.1
Function module AZX61.1 offers the following choices for changing control:
- Changeover of acting direction (page 65)
- Sequence control (page 64)

Stem heating element ASZ6.6
Stem heating element ASZ6.6 prevents the formation of ice on the stem when medium temperatures drop below 0 °C. It is suited for universal use with valves having a stem diameter of 10 or 14 mm.

⚠ **The stem heating element heats up to 85 °C.**

⚠ **This is a PTC element, which means it shows up with a low resistance at power up – inrush current may reach 8.5 A at low temperatures / high voltage level**

4.14.6 Mechanical accessories

Weather shield ASK39.1
Weather shield ASK39.1 protects the actuator when installed outdoors. This does not lead to a change of IP class (IP54).
SA..61../MO are not suitable for outdoor applications

Mounting sets ASK3..N

Mounting sets ASK31N, ASK32N, ASK33N and ASK35Nenable the actuators to be fitted to slipper valves VBF21.., DN65…150 and butterfly valves VKF41.. and VKF45 (page 30-37).

6.3   Connection diagrams

SA..31..

A	Actuator
L	Phase
N	Neutral
N1	Controller
Y1, Y2	Positioning signals

SA..61..

A	Actuator
F2	Frost protection thermostat; terminals:
	1 – 2 frost hazard / sensor is interrupted (thermostat closes with frost)
	1 – 3 normal operation
F3	Temperature detector
F4	Frost protection monitor with 0…1000 Ω signal output, does NOT support QAF21.. or QAF61..
M	Measuring neutral
N1	Controller
SN	System neutral
SP	System potential AC/DC 24 V
U	Position feedback– (signal common is M)
Y	Position signal
Z	Positioning signal forced control

SA..61../MO

A	Actuator
G0	System neutral (SN)
G	System potential (SP)
N1	Controller
REF	Reference (Modbus RTU)
+	Bus + (Modbus RTU)
-	Bus - (Modbus RTU)

8 Glossary

8.1 Symbols

⚠	Caution, general danger – read the notes!
⚠	Caution, hot surface – read the notes!
	Condition as supplied to costumer
✳	Crosstip screwdriver (Pozidriv)
⊖	Slotted screwdriver
	Screw wrench
	Allen key

8.2 Terms

Climatix ™
The complete product range of flexible and scalable control solutions, standardized up to and including freely programmable solutions.
Specialized for HVAC applications.

DIL switches
A DIL switch shows the switching choices in the form of a place value system (dual in line) in relation to basis 2 (on and off).

DN
Nominal size: Characteristic for matching parts of the piping system.

Forced control
Forced control serves for overriding automatic mode and is implemented in the structure.

HEX switches
A HEX switch shows the switching choices in the form of a place value system (hexadecimal system) in relation to basis 16 (0…9 and A…F).

kPa
Unit of pressure: 100 kPa = 1 bar = 10 mWS.

k_{vs}
Nominal flow rate: Nominal flow rate of cold water (5…30 °C) through the fully open valve (H_{100}) at a differential pressure of 100 kPa (1 bar).

LED
Light emitting diode.

Modbus RTU
Open communications protocol (client/server architecture), transmits data as binary data.
RTU: Remote Terminal Unit.

PN
PN class: Characteristic relating to the combination of mechanical und dimensional properties of a component in the piping system.

Position feedback
Signal used to acquire the position, fed back via an input.

Spring return facility
Refer "fail safe function".

Δp_{max} / Δp_{maxV}
Maximum permissible differential pressure across the valve's control path, valid for the entire actuating range of the motorized valve (V = diverting mode).

Δp_s
Maximum permissible differential pressure at which the motorized valve will close securely against the pressure (close off pressure).

slotted screwdriver
